

Group #9:

Info:

Graded by:

[Deliverables 1-3] Stephen Luc (stephen.luc@mail.utoronto.ca),

[Deliverables 4-6] Daniel Persaud (dev.persaud@mail.utoronto.ca),

Remark Policy & Rubric: please consult the handout / course syllabus, see mark breakdown section for weighting of deliverables.

Mark Breakdown

Deliverable #1 (summary.md):	10/10
Deliverable #2 (competition.md):	0/10
Deliverable #3 (personas):	25/25
Deliverable #4 (user_stories.md):	17/25
Deliverable #5 (UI/UX):	20/20
Deliverable #6 (process.md):	10/10

Total Mark: **82/100**

TA Comments

- **Competition.md**, Blackboard and Piazza are not competition for a search engine application. They are indeed a competition when it comes to different software that is used within the UTSC community for accessing different resources and information but the main product you are trying to create is an engine that allows students to search up files and documents through a query of key words. Some examples of competitors can be like Google, Bing, OneClass, etc.
- **User Stories**, the term user is too vague user stories require actual persona names (-8)
- **UI/UX**, logged in home screen really should include a search bar for UX purposes. You may want to include document previews like in search results for *MY FILES* & *Course* pages.
- **Process**, try to aim for daily status updates (i.e. daily standup meetings) to avoid complications in later phases.
